WHAT IS ELIONCE™?

Elionce™ is a premium thread lift treatment, which uses Polydioxanone (PDO) to create a natural, fresher and younger looking face. Often referred to as the "20 minute lift" due to its simplicity and minimal downtime.

WHY ELIONCE™?

- Premium biodegradable threads
- Non-surgical face lift
- Safe and simple procedure
- Minimal downtime
- Immediate and long lasting results

Rejuvenate your life, shape your future.

WHAT IS THE PROCESS?

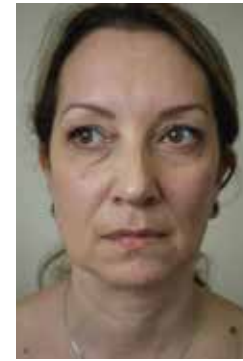

A local anaesthetic is administered to ensure the patient is comfortable. The procedure involves the insertion of the Elionce thread under the skin via a very fine needle or a specifically designed cannula.

The threads work in 3 ways:

- Thread anchor points hold the tissue and provide lifting when tensioned.
- Mechanical stimulation of the cells in the skin following thread insertion into the dermis or subcutaneous tissue.
- Via the biomedical properties of the Polydioxanone (PDO) which as the threads dissolve, promote the generation collagen to maintain the lifting effect and improve skin tone.
